

Autism  Screen

You can NOW screen your child for autism from the convenience of your PHONE or mobile device.

The American Academy of Pediatrics recommends that ALL CHILDREN be screened for autism twice, at 18 and 24 months.

This App allows you to VIEW VIDEOS of behavior and HEAR descriptions of the behavior.

You will receive a result IMMEDIATELY that you may share with your child's primary health care provider/ pediatrician or Early Intervention provider/ school.

You provide us with your child's date of birth, the App will chose how many items pertain to your child.

We show you videos of behavior and simultaneously describe the behavior.

If you are not sure about your response, you may watch the video and hear the description multiple times.

Some of the items depict typical developmental skills and other items depict behavior that may be of concern.

The questionnaire may be completed multiple times for a child. You may screen multiple children.

The results of this questionnaire may be emailed to you or your child's primary health care provider.
